DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-19, drawn to a semiconductor device, classified in class 257, subclass 315.
 - II. Claims 20-43 drawn to a method of making a semiconductor device, classified in class 438, subclass 201.
2. Inventions I and II are related as product made and process of making. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). In the instant case, instead of the method use in claims 20-43, the product of claim 1 can be made of monocrystalline silicon, instead of polysilicon, as set forth in claim 20; and the dummy silicide structure can be partially masked before the metal deposition step so as to be a "partially silicided dummy electrode" instead of a fully silicided gate electrode, as set forth in claim 34.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
